

MultiSave

The Digital Highway for Buildings

Today, modern consumers have high demands to the buildings they live in. The buildings need to be intelligent and provide the residents with security, comfort and help achieve energy savings. Buildings vary and so does the needs of the residents that occupy them. This places high demands on the choice of Control Solution.

To the building- developer and/or owner it is crucial that the Control Solution is reliable, economical and user-friendly and is able to make controlling, monitoring and reporting easier on a day-to-day basis.

Our solution is called MultiSave.

MultiSave creates value by:

- › Connecting the building's automation, present and future in ONE solution
- › Meeting individual needs
- › Ensuring energy savings
- › Being user-friendly
- › Making it easy to monitor and report
- › Delivering high reliability
- › Future-proofing your investment
- › Making the building more attractive for resale/renting

With MultiSave installed, it is possible to connect existing-, new- and future building automation to the solutions backbone and control it all with one controller - effectively keeping down costs and securing the investment long term.

MultiSave ensures your building

MultiSave's digital highway ensures that the building is optimized for todays-, and prepared for future building automation.

Increased security:

- › Interactive communication, alarm and surveillance
- › Monitoring possible threats to the building (humidity, water, storm and fire)

Maximum comfort:

- › Internet, TV and phone
- › Automation, surveillance and control of water, heating, indoor climate and electricity

Energy Savings:

- › Automation, surveillance and control of water, heating, indoor climate and electricity

How MultiSave is built-up

The MultiSave solution consists of 2 units;

- › Main Controller (WP4100) is installed in the control room of the building
- › Sub Station (WP-Line 111) which is installed in each apartment

The units are connected via optical fiber cable.
