

COVID-19: Mita-Teknik are securing consistency of supply

With global production setups in Europe and Asia, Mita-Teknik is supporting continued deliveries for essential industries.

Currently, the whole world is affected by the Corona Virus "COVID-19" outbreak. And while this has become a global health crisis, it is also making an enormous impact on the global economy and more specific, on many companies who are fighting a tough battle to sustain operations while focusing on employee safety.

In order to ensure the continuity of our controls supply worldwide, we are taking significant measures to strengthen the resilience of our teams and supply chain. At Mita-Teknik, we have taken all the necessary precautions to protect our employees as well as our customers.

- One of the major challenges we see right now, is in the supply chain. Many of our partners are struggling heavily to get their operational production lines running. With our state-of-the-art production setups in both Europe and Asia, we can balance peaks and support our customers and partners, says CEO Klaus Kromann Knudsen.

- We are extremely flexible and that is a huge strength in a global crisis as the one we are experiencing. Keeping companies running, ensuring workplaces and consistency of supply, is how we as a global player can help our partners getting through this extraordinary situation. We are working nonstop to keep the promises to our partners - and to keep our customer deliveries, he adds.

Focus on Flexibility

Thanks to the transfer of know-how and LEAN production principles, Mita-Teknik has modern, automated production units with a quality level meeting the highest standards. However, security of supply and high quality are not the only parameters that Mita-Teknik's customers benefit from, according to Klaus Kromann Knudsen:

- In severe situations like the one we are facing right now, partnerships are becoming even more vital. Our customers and partners include global players within renewable energy, marine and the machine industry. Areas, productions and supply chains we are all dependent on. Therefore, we see it as our top priority to keep a stable and reliable supply to our customers.

About Mita-Teknik

Mita-Teknik has produced control automation for various industries since 1969 and been a part of the Wind industry since its beginning in the 1980's. Today, more than 50,000 wind turbines worldwide are controlled and monitored by Mita-Teknik's Control Systems. Mita-Teknik provides Control Systems, Pitch Systems, Condition Monitoring, SCADA, and Retrofit solutions - all designed for high yield cost-optimized wind turbine operation.
